## DEAR SAILOR,

We are happy to present to you a newly published cruising guide that will lead you to discover the East Baltic Coast of the Baltic Sea – a network of more than 50 marinas in Estonia and Latvia.

Always having been part of the maritime history of Northern Europe, today's Estonia and Latvia retain the charm of Hanseatic cities, while at the same time offering untouched nature, cultural heritage and developed modern economy.

The destinations of the East Baltic Coast offer diverse sailing experience along sandy or rocky beaches and cosy small islands. You can visit fishing villages, the green countryside, port cities, vibrant capitals – Tallinn and Rīga, popular resorts and gourmet restaurants. And you can enjoy a pleasant and safe stay in the well-equipped and modern marinas.

This cruising guide provides information about the marinas: contacts, approach guides, available services and advice for tourists. Marinas are presented in five chapters that are arranged geographically, starting from Liepāja Marina in the south and continuing along the coastline to the north:

**Western Latvia – Kurzeme** – covers the coastline of the Baltic Sea and continues to the Kolka Cape – the very northern point of Kurzeme region. Marinas in this part are located in estuaries of the largest rivers. There is a good connection to the Saaremaa Island (Estonia) and Gotland (Sweden) from these marinas.

**The Gulf of Rīga** includes both **Latvian** and **Estonian** marinas. The Gulf of Rīga is a gentle sailing area which invites to enjoy endless sandy beaches. Mooring at the very centre of Rīga, the metropolis of the Baltics, allows to discover this dynamic port city on the trade route between the Western Europe and the East. Enjoy sailing along the coastline and take off to discover the Estonian islands.

**Western Estonia** is comprised of almost 30 marinas, both on the islands and mainland, located close to each other. It is worth to spend few hours sailing to visit Saaremaa, Hiiumaa, and several smaller islands, where the unspoiled nature, local traditions, and rural atmosphere will charm you.

**The Gulf of Finland** is the northern part of the East Baltic Coast. Sailing around Tallinn allows to visit the city or to discover smaller islands nearby. Here you may start the journey towards St. Petersburg (Russia) or continue up to Scandinavia – by the shortest route across there are only 45 nmi to Helsinki.

May this guide provide you with the insights that will make sailing at the East Baltic Coast an unforgettable and pleasant experience!

The East Baltic Coast editorial team

# SAILING CONDITIONS IN THE BALTIC SEA

## CLIMATE AND WEATHER (CLIMATIC SUMMARY)

The Baltic Sea has a temperate continental climate. Spring and autumn are relatively long in the coastal regions of the Baltic Sea. Winds from the N and NE bring cold arctic air to the area, resulting in severe frost in winter. W winds bring humid and E winds bring dry air masses to the Baltic Sea, determining the local precipitation pattern.

## AIR TEMPERATURE

The region's climate is warmer and more humid than elsewhere at this latitude. The average temperature in the East Baltic is -6°C in January, and about 17°C in July. On clear summer days the temperature climbs over 30°C and is above 23°C on most days during summer.

## WIND

Moderate to strong SW and N winds dominate in the open parts of the Baltic Sea. The wind pattern in the Gulf of Finland is different – SW and W winds dominate with strong and moderate winds; in spring and summer NE winds also occur quite often. Westerly storms are stronger than easterly storms, with maximum wind speed up to 22-23 m/s. The yearly average wind speed in the West Estonian Archipelago and in the open coastal areas of Baltic Sea, measuring 10 m from the ground level, is 6-7 m/s. The inland wind speed is significantly lower. Winds are stronger in autumn and spring, when the cyclonic activity is high, and pressure gradients between the low-pressure area of Iceland and the high-pressure area of Siberia are high. In spring and summer, a local wind blowing onshore in the daytime

## GENERAL INFORMATION

The East Baltic Coast region altogether has over 2400 nautical miles of shoreline from Lithuania to Estonia  
Lithuania: 45 nmi,  
Latvia: 286 nmi,  
Estonia: 2051 nmi.  
The shortest crossing from Latvia to Sweden is 80 nautical miles, and from Estonia to Finland – 25 nautical miles.  
There are over 2200 islands and islets in the region.

and offshore at night is quite frequent, the reason for which lies in the difference between temperatures of the sea and the land.

## HUMIDITY

The soft maritime climate results in a significant amount of water vapor in the air throughout the year. The air is moister in the autumn and winter. In spring, the weather is mainly dry and clear. Relative humidity is the lowest in May and June, when it decreases to 70% in the area of the Gulf of Rīga.

## VISIBILITY

Good visibility is a common feature on the East Baltic Coast. In about 80% of observations, visibility is greater than 5 nmi in summer.

As a result of relatively high humidity and the thermal contrast of land and sea, fog is quite common on the coast and above the coastal sea, causing visibility to drop to less than 0.5 nmi. During the warm season, the temperatures that generate fog in May are 4...5°C and in July – 12...15°C. From August till October, fogs emerge most often at low temperatures – 2...12°C.

## CLOUDINESS

The sky is usually cloudy in cyclonic conditions, and clear in anticyclonic conditions. Cyclones reach the region quite rarely in spring and summer, most frequently in November and December. There is a very close connection between cyclonic activity and the amount of low clouds (stratocumulus, stratus, nimbostratus). Cloudiness is the highest in November and December.

## PRECIPITATION

The average annual rainfall in the coastal area is between 550-650 mm. The highest rainfall occurs in August; on the islands in the Gulf of Finland – also in September and October. There are approximately 100-120 rainy days per annum, assuming a rainy day is a day with at least 1 mm of precipitation.

## ATMOSPHERIC PHENOMENA

There are approximately 12-14 days with thunderstorms per annum in the area, mainly from May until August, very rarely during other months. Heavy rain, hail, strong gusts, tornados, and squalls at sea usually occur together with thunderstorms; in rare occasions you can also witness waterspouts.

Mirages, i.e., fata morganas occur quite often during spring and autumn in clear and quiet weather, like a natural convex lens that optically deforms the visible distance and dimensions of objects. Objects observed visually at sea or on the coast, as well as islands, may appear to be higher than they really are or shifted aside.

## HYDROLOGY (CURRENTS)

There are almost no permanent currents in the Baltic Sea. The speeds of tidal currents are also slow - 0.02-0.04 kn, although in some areas of the Baltic Sea current speeds may rise to 0.2 kn as a result of different tidal components.

The main driving force of currents in the Baltic Sea is the wind. The surface current that appears with permanent wind is directed 45 degrees to the right of the wind direction. In deeper waters, the flow turns clockwise. In shallow waters, the surface current's direction is more similar to the wind's direction. In moderate winds, the typical surface current speed in the open waters of the Baltic Sea is 0.3-0.4 kn and in the gulfs - 0.2-0.3 kn.

## SEA LEVEL

The Baltic Sea, as a typical inland sea, is separated from the ocean by the narrow and shallow Danish Straits. Limited water exchange through the straits determines the hydrology of the brackish water and the dynamics of the water masses in the Baltic Sea. Research has shown that tides in the Baltic Sea cause only minor fluctuations in the water level, 5-7 cm.

Fluctuations in the sea level of the Baltic Sea occur mainly due to seasonality. Momentary values of sea level may change within the amplitude of 2.3 m in most parts of the coastal sea, but it may vary at different parts of the coast due to the character of the coastal sea, local wind patterns, etc. The sea level near the coast changes within the range of +130 cm and -100 cm.

## SEA STATE

The Baltic Sea is a relatively small and closed area. Quite sharp wind waves predominate, having mainly the same direction as the wind in the open part of the sea. The Baltic Sea is mostly calm during spring and summer.

During light and moderate winds, the wave height in both coastal and open sea is relatively even. Wind speeds of 6-8 m/s produce waves of significant height of up to 1 m, and wind speeds of 9-11 m/s produce waves up to 1.5 m. In even stronger winds, the wave height substantially varies in different parts of the sea, depending on the wind direction and persistency, and reaches its peak in 6-8 hours.

## WATER TEMPERATURE

The yearly average water temperature in coastal Baltic Sea is 7.1...7.4°C, influenced mainly by air temperature. The highest average water temperatures occur in July and August (15.6...16.7°C). During calm and sunny summers, temperature in coastal surface layers rises up to 25°C, but may quickly drop to 5...10°. This phenomenon is called upwelling, where the warm surface layer is carried away by offshore winds and is substituted by cold water masses from deeper layers of the sea.

## SEA ICE

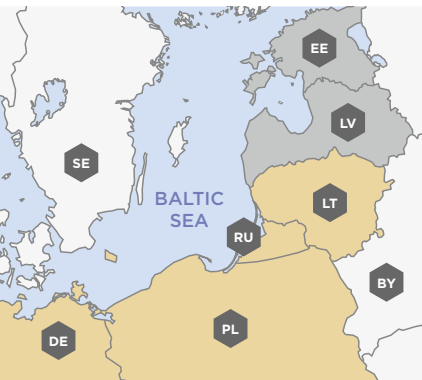

Variability of sea ice formation, duration and breakup is extremely high, and every winter is unique. The freezing point of seawater in East Baltic Sea area is approximately -0.4°C due to the low salinity, and even higher in the vicinity of rivers discharging fresh water into the sea.

Epic nature, vibrant cities, long sandy beaches, rugged cliffs, tranquil lagoons and romantic river landscapes – this is how one could describe the South Baltic Coast, which stretches between the **Island of Rügen** (Germany) and **Szczecin** (Poland) in the west, **Bornholm** (Denmark) in the north, as well as **Gdańsk** (Poland), **Kaliningrad** (Russia) and **Klaipėda** (Lithuania) in the east.

More than 180 leisure boat harbours – both small, cosy ones and five-star marinas – are available for a safe and comfortable stay. Some of them are located directly in lively cities, like Stralsund (Germany), Svaneke (Bornholm) or Klaipėda (Lithuania). Others are based close to endless sandy beaches, such as Świnoujście or Darłowo (Poland). At Klaipėda, the last stop before the East Baltic Coast, you can stay directly in the city (Klaipėda Castle Harbour) or on the Curonian Spit (Smiltynė Yacht Club Marina). And how about a stop-over in Kaliningrad (Russia)? That makes the journey from Poland to Lithuania a bit shorter and more exciting. And getting a visa is quite easy!

### TOURISM SERVICES AND OFFERS IN THE SURROUNDING AREA

Liepāja is the 3<sup>rd</sup> largest city of Latvia, and its yacht marina is located in the Trade Channel almost in the very city centre. The charm of Liepāja is concealed in its special atmosphere. Perhaps a bit restrained and harsh, yet also noble and rebellious. Sometimes calm, sometimes swirling – like the sea that washes upon the shores of Liepāja. Genuine and truthful – such is Liepāja. Today Liepāja is a modern 21<sup>st</sup> century city with a global reach, proven by not only the large number of international competitions and performances by local and international artists, but also the modern and innovative companies and the services that they provide.

### ACCESS TO THE MARINA FROM THE SEA

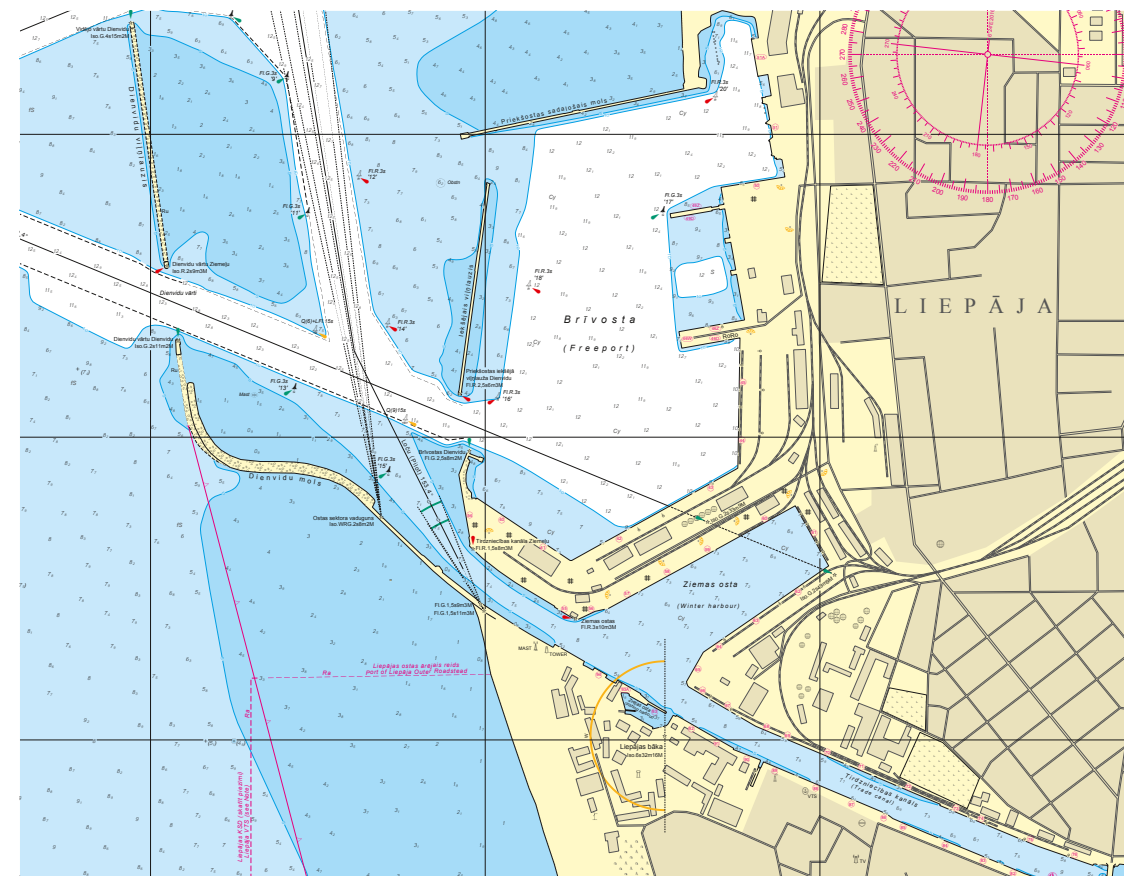

The fairway starts from the first pair of buoys, No. 1 and No. 2 (56°31,38000' N; 20°54,11000' E). Between the buoys you will see the central leading line (red); proceed by course 068°. After passing buoy No. 5, alter course to 112° and keep to the green leading line to south entrance. After passing green buoy No. 15, alter course to pilot leading line (green light), course 153°, and proceed forward, then alter course to portside and keep to the middle of the channel. Keep going till the end of channel. The marina is located at berths 80 and 81 on the starboard side of the channel, near a bridge.

**TOURISM SERVICES AND OFFERS IN THE SURROUNDING AREA**

Although Ventspils Marina is located in the industrial part of the city, when arriving in the city centre, you will feel a breath of Europe. Here you will find that in Ventspils even time is counted differently, and flowers, in spite of the rhythm of nature, blossom earlier than in other places in Latvia. Holidaymakers can enjoy an easy walk along the city's cobbled streets. Ventspils is friendly for families with children, it is a capital of flowers and fountains; all over the city, you can find colourful cow sculptures, but streets, parks, squares and courtyards are decorated with flower sculptures, compositions, and tasteful flowerbeds. Welcome to Ventspils, a city with a promising future!

**ACCESS TO THE MARINA FROM THE SEA**

The port of Ventspils can be identified from a considerable distance by the tall church spire, located in the town centre on the S side of the river. Currents in the river average 1 kn, increasing to 2 kn near the entrance. The current sets N or S along the coast in the port entrance, depending on the wind. The NW approach channel leads SE from lighted buoy "B" (57°28'.52 N; 21°25'.91 E) to the Ventspils Outer Harbour, protected by two breakwaters, N and S. When entering the harbour, turn into the fishing harbour and marina - it is located on the S (left) side of the Venta River. Ventspils Marina offers 110 m of mooring at a depth of 3.5 m. Tides are insignificant, but the water level fluctuates with wind conditions and may differ by 0.3 m above or below the mean.

# RĪGA

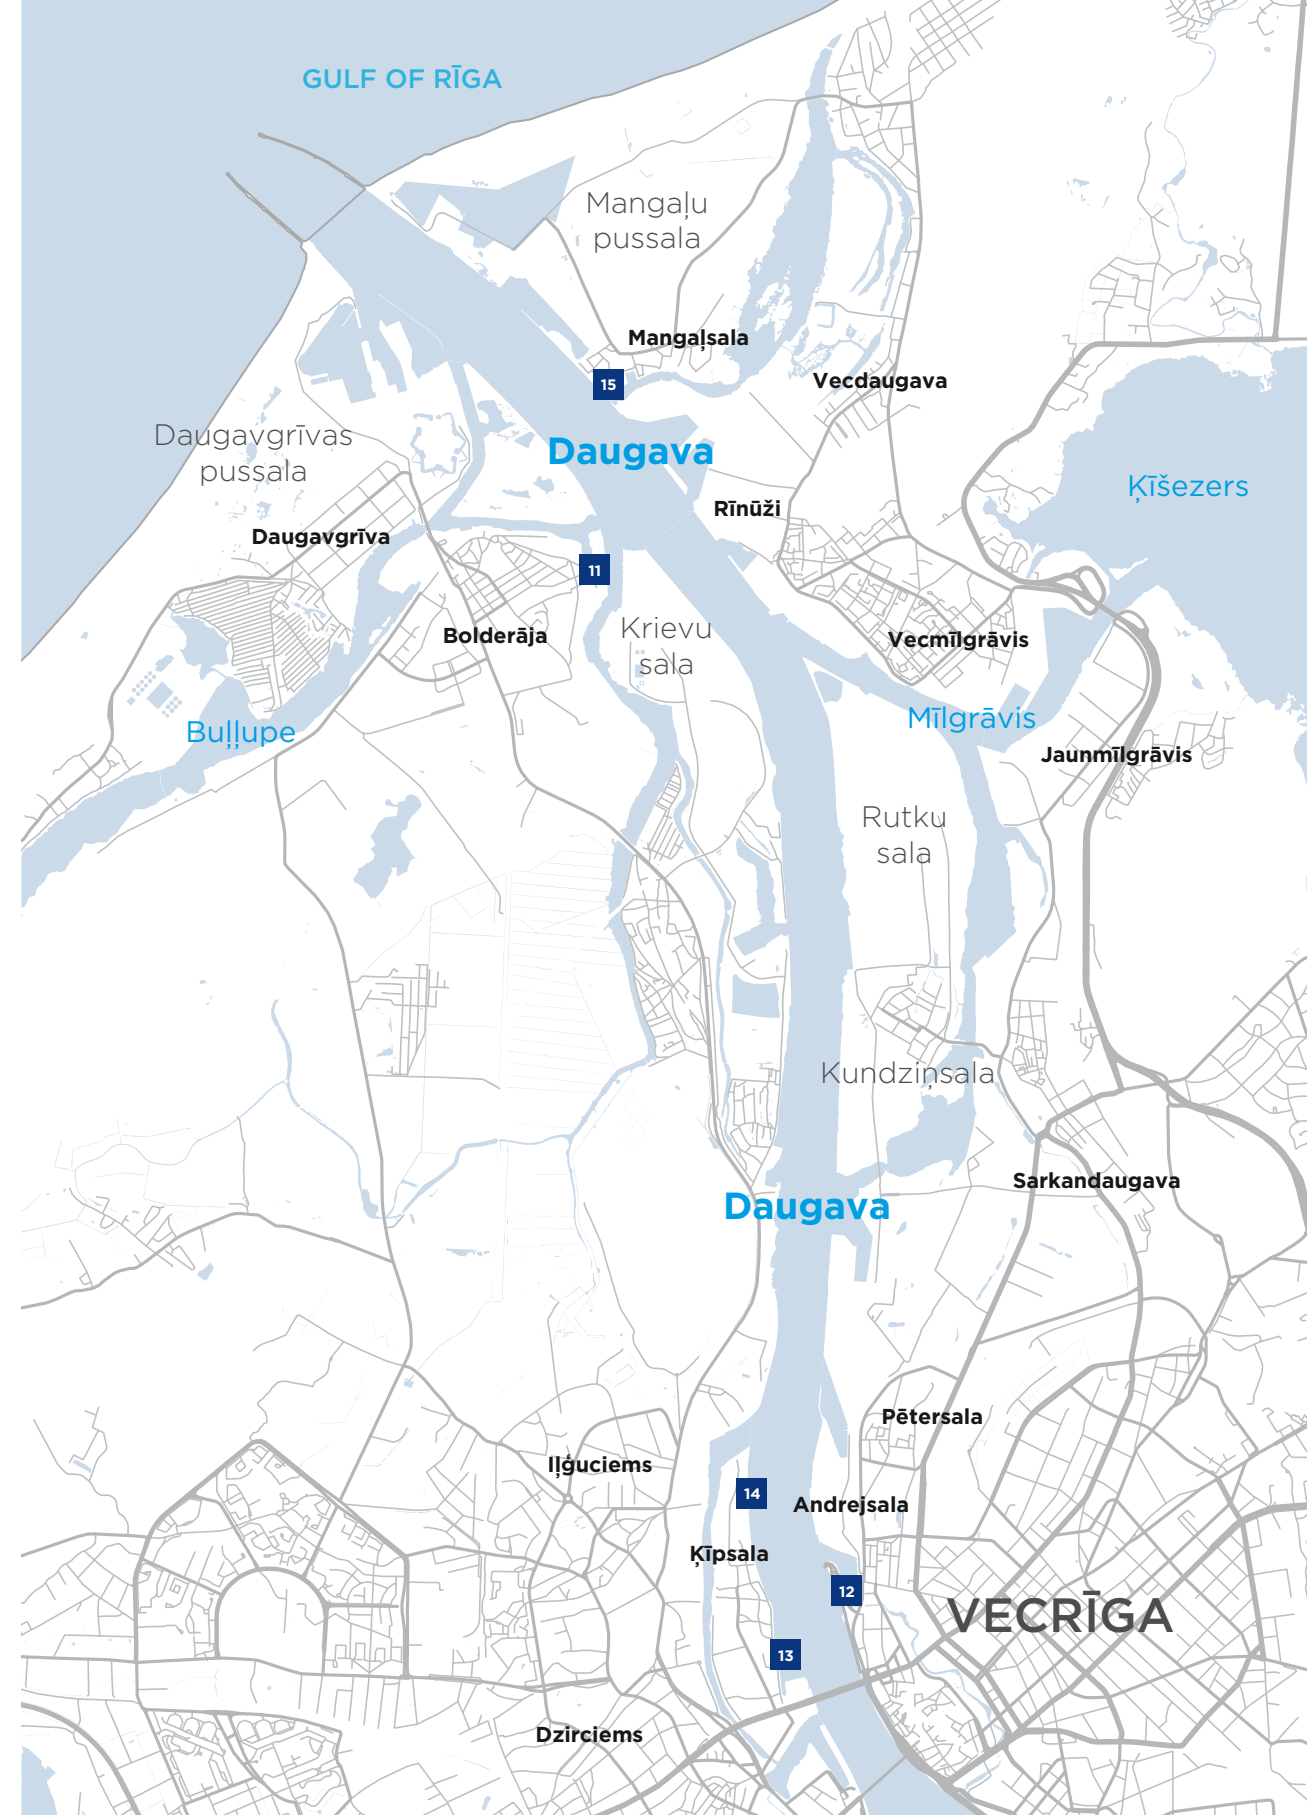

**TOURIST  
INFORMATION**  
[LiveRiga.com](http://LiveRiga.com)

Rīga is the largest city in the Baltic States and the capital of Latvia, the centre of its political, economic and cultural life.

Rīga has always been a crossroads, a melting pot of various nations and cultures. It was founded in 1201 and is a former member of the Hanseatic League. In its 800 years of turbulent history, everyone from German knights to Swedish kings and Soviet commissars have left their mark, and today Latvia's capital is an exciting European metropolis at the crossroads of eastern and northern Europe.

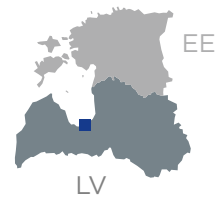

The unique patina in this city, which has nearly 700,000 inhabitants, has been formed by the proximity of water – the Daugava River, and the Gulf of Rīga. Rīga Old Town is a UNESCO World Heritage Site, noted for its Art Nouveau architecture and the 19<sup>th</sup> century wooden architecture, and nowadays the historical old town is both a glamorous hub of the city and a cosy place to meet up with good friends. It is possible to arrive in Rīga via all three means of transportation – air, land and water – and the city can be observed from both above and the water. Like any city full of creative energy, it vibrates, pulsates, and astonishes at any time of year.

## TOURIST INFORMATION

### About Pärnu:

[www.visitparnu.com](http://www.visitparnu.com)

### About Kihnu:

<https://kihnu.kovtp.ee>

Pärnu is the summer capital of Estonia. Pärnu is famous for its sandy beaches, lovely atmosphere and numerous festivals. In the centre of Pärnu you can explore many lovely parks, examine diverse architecture from the medieval period to nowadays, or enjoy one of the many spas.

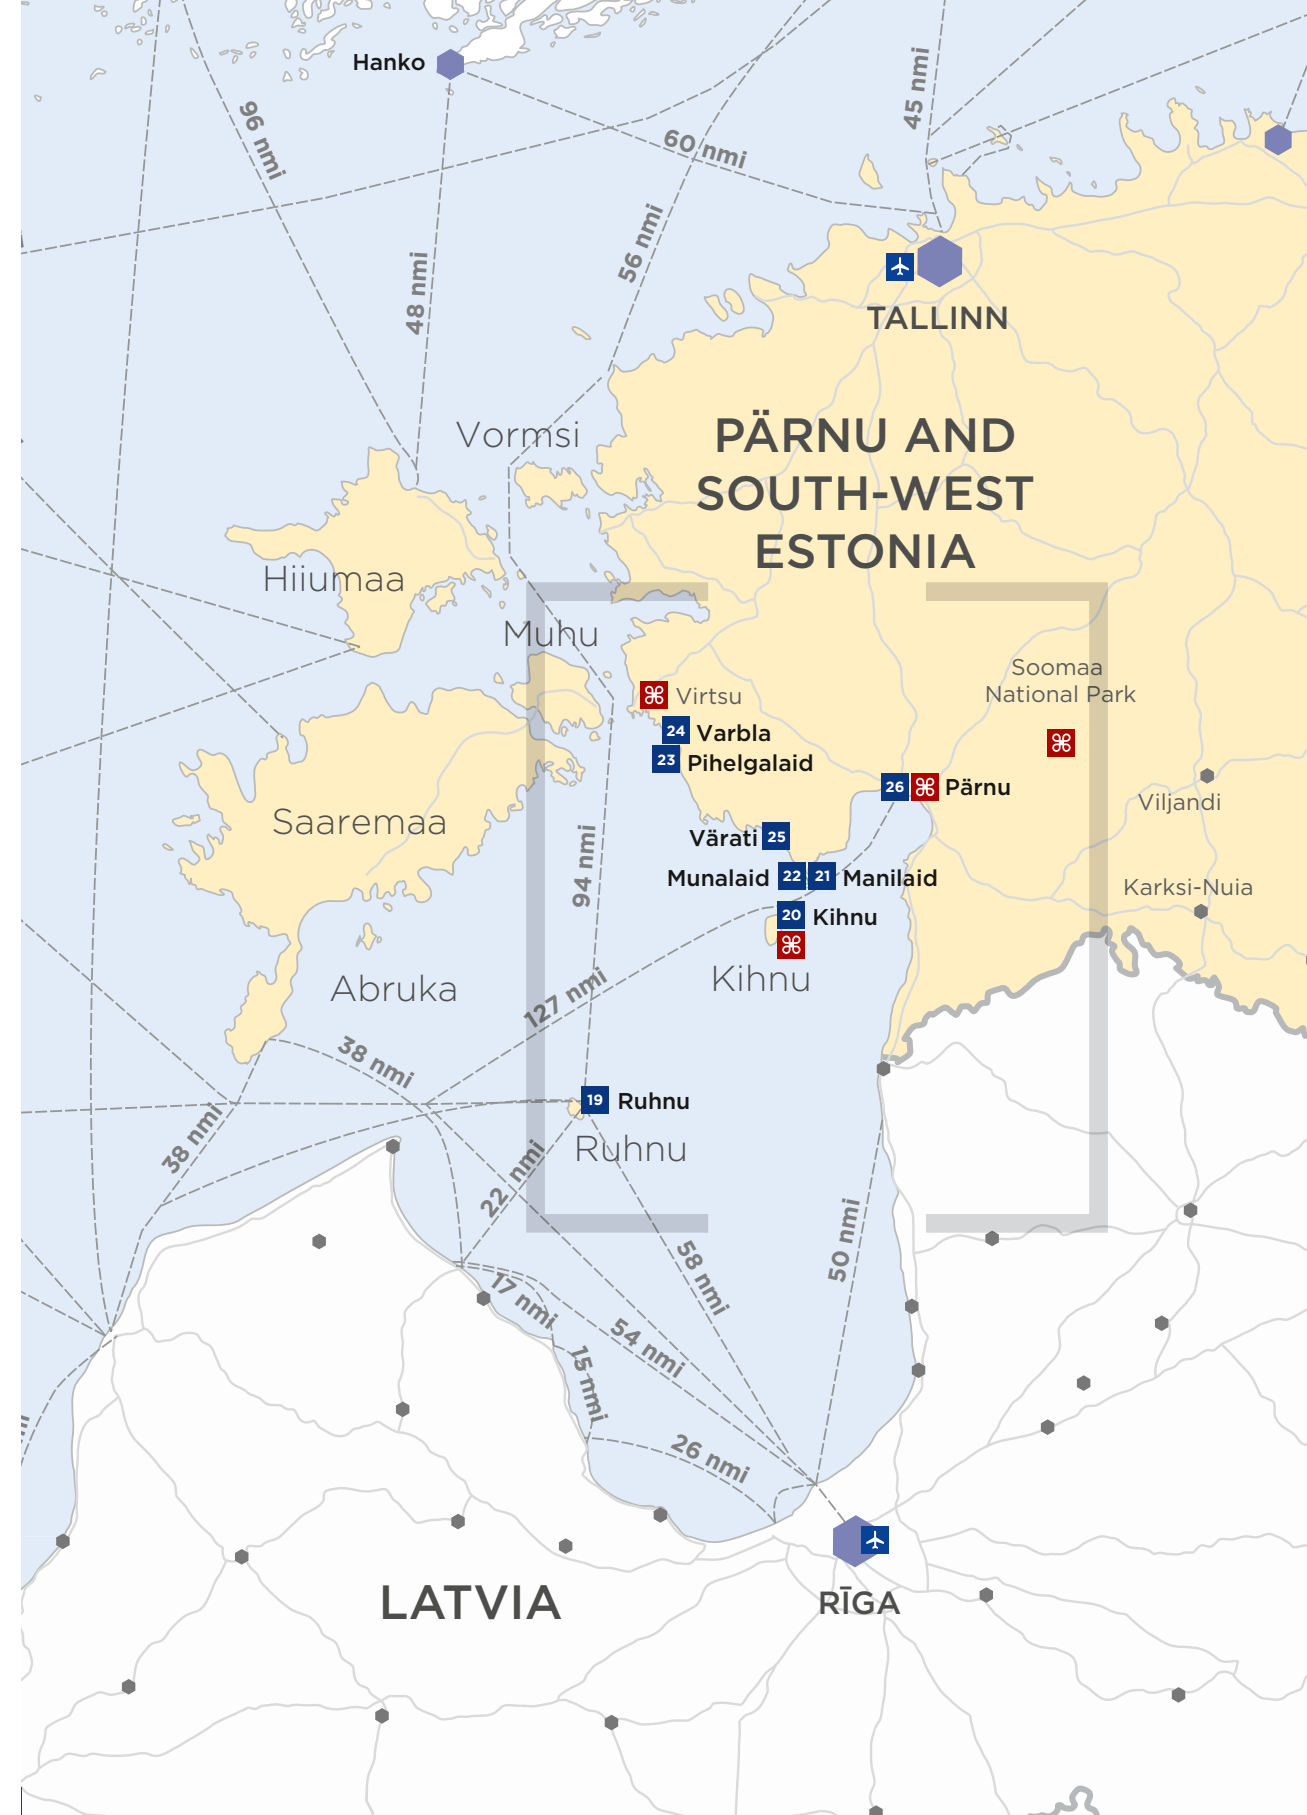

We recommend to travel outside of Pärnu to see pine forests, natural sand beaches, bogs, fishing villages, manor complexes, museums, and wildlife.

Don't forget to sail to Vormsi and Manija islands to see the ethnic culture and lifestyle of the locals!

## PLACES TO VISIT

- Pärnu beach promenade – take a long walk along the beach and enjoy a good meal in one of the beach cafes
- Pärnu Vallikäär – a romantic promenade with a marine-themed playground
- Pärnu Maarja-Magdaleena Guild – visit different handicraft workshops
- Kihnu Museum – the cultural space of Kihnu, which has been included in the UNESCO's list of Masterpieces of Oral and Intangible Heritage of Humanity

# WESTERN ESTONIA

## TOURIST INFORMATION

### Information about Saaremaa island

[www.visitsaaremaa.ee](http://www.visitsaaremaa.ee)

### Hiiumaa information

[www.hiiumaa.ee](http://www.hiiumaa.ee)

### Western Estonia and Haapsalu information

[www.visithaapsalu.com](http://www.visithaapsalu.com)

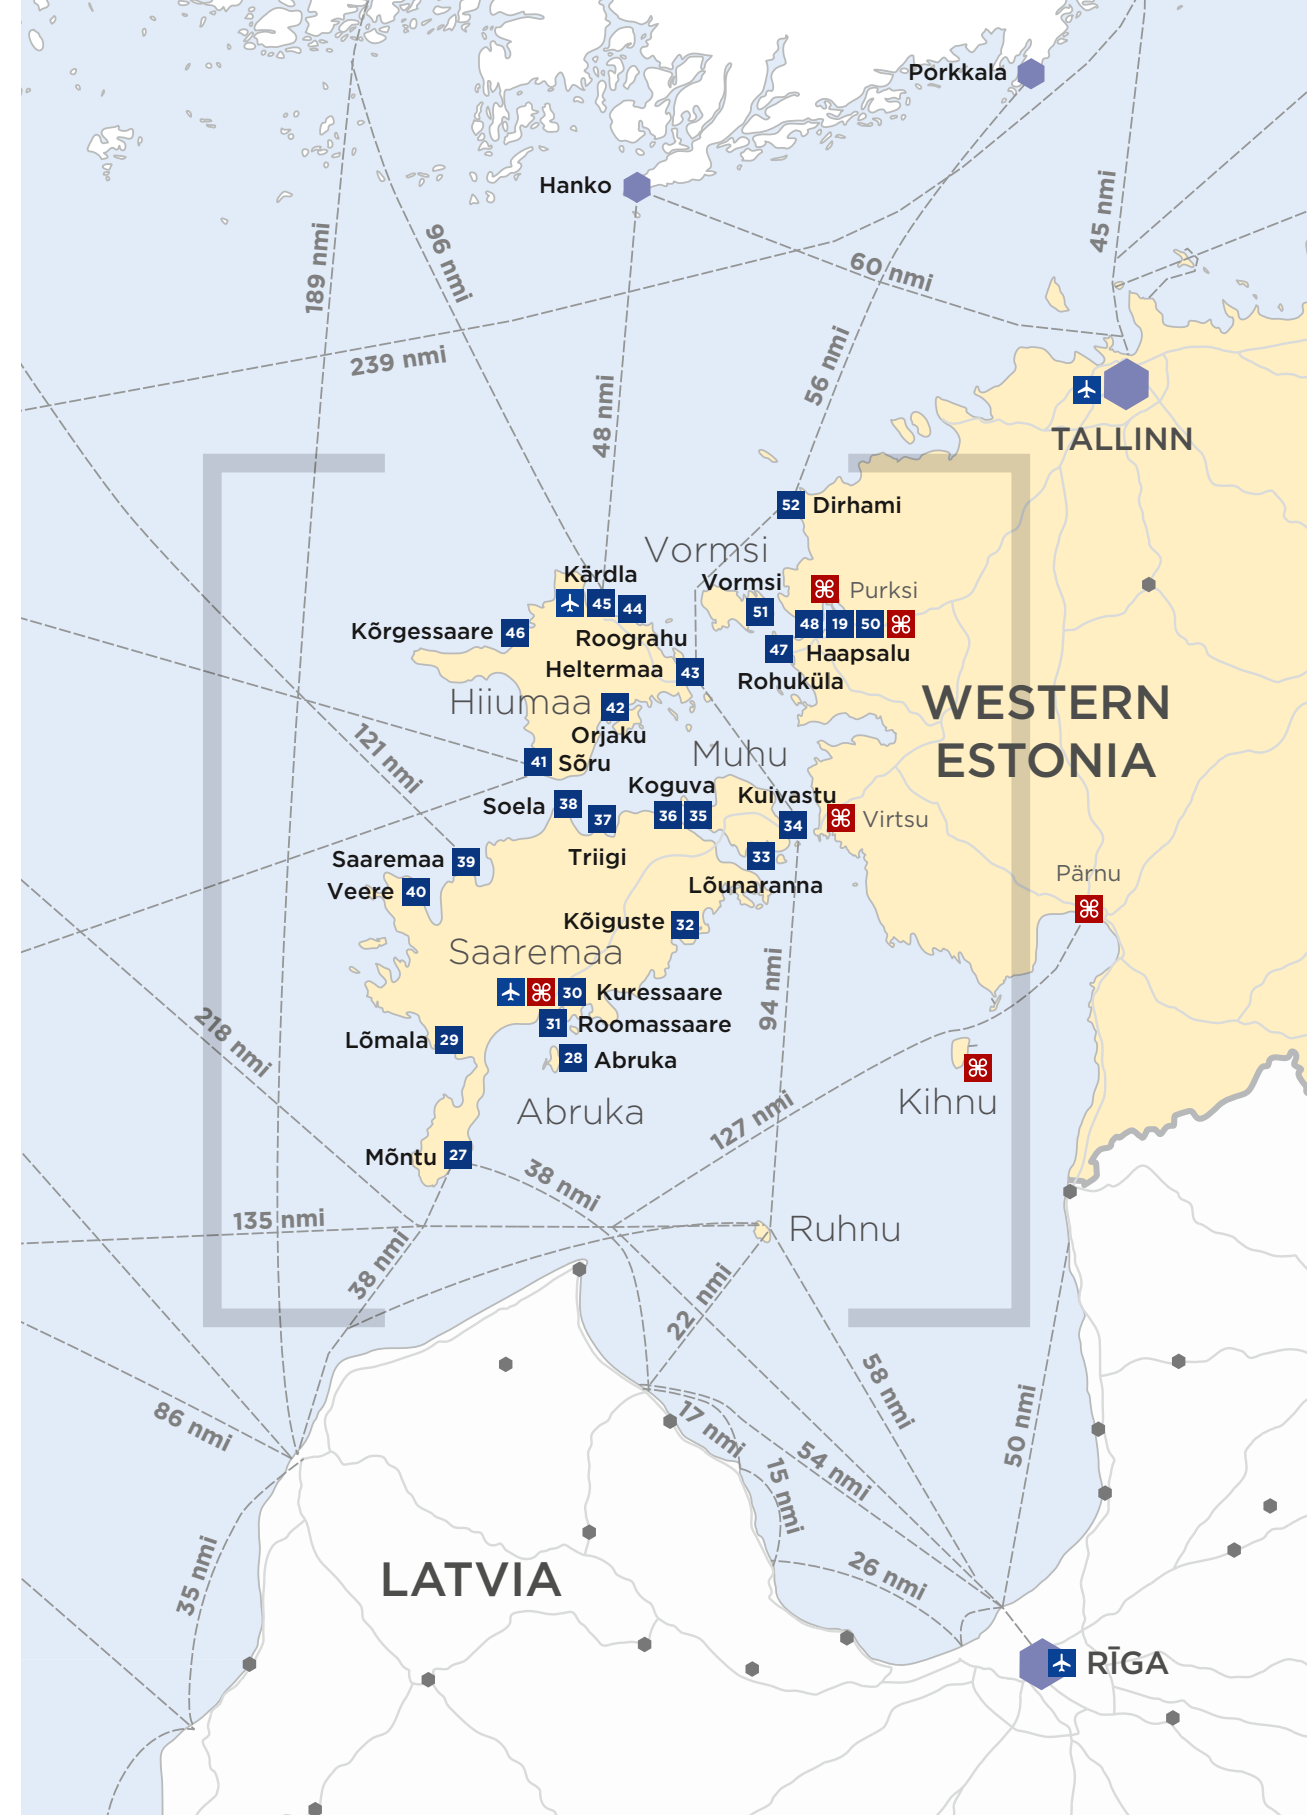

Estonia's islands are very popular holiday destinations among both tourists and locals, and Saaremaa is the biggest island in Estonia. The island has numerous marinas and many sightseeing attractions.

### PLACES TO VISIT IN SAAREMAA

- Sõrve lighthouse - the highest lighthouse in Saaremaa. If the weather is good, you can see the shores of Latvia
- Angla windmills - the best-preserved windmill groups in Estonia
- Kaali meteorite craters - the most easily accessible craters in Europe
- Kuressaare Castle - the best-preserved medieval fortress in the Baltic States, with a big museum
- Viidumäe Nature Reserve - a hiking trail with a nearly 30 m tall observation tower, where you can enjoy the beautiful landscape
- Hiiumaa is famous for its diverse nature. Enjoy hiking trails, museums, fishing villages, and various lighthouses

### PLACES TO VISIT IN HIIUMAA AND HAAPSALU

- Hiiumaa Säätetirp - beautiful nature, where hills that are covered with vegetation alternate with low, stony beaches
- Hiiumaa Kõpu lighthouse - the oldest lighthouse in the Baltic States
- Haapsalu Castle and Cathedral - one of the best-preserved medieval complexes in Estonia (dates back to the 13<sup>th</sup> century). Haapsalu is also famous for its spas and therapeutic mud

## LÕMALA

In Lõmala harbour you can rent out the entire building for seminars or just see their exhibit "Life of coastal fishermen". Before coming to the harbour, please check that the harbour building is not reserved!

Sheltered from all directions, except from NE winds. Entry recommended only in daylight. From WP1 (58°09.70' N; 22°07.80' E) proceed to WP2 (58°10.20' N; 22°07.50' E). Channel to the harbour is marked by spar buoys. There is a day marker (58°10.37' N; 22°07.18' E; red metal cylinder) on the head of the breakwater.

30

## KURESSAARE

Kuressaare is the capital of Saaremaa. The city has a population of about 15 000. In Kuressaare you can enjoy different spas and restaurants or visit the 14<sup>th</sup> century Bishop's castle. Kuressaare has many different all-year-round festivals, and you can also play tennis, golf, or pool.

Sheltered from all wind directions. Approach from SE along the Roomassaare leading line 321.5°-141.5° until reaching WP1 (58°11.74' N; 22°32.00' E). WP2 - 58°11.80' N; 22°30.90' E, WP3 - 58°11.78' N; 22°28.60' E (first waypoint for approach from SW); WP4 - 58°12.50' N; 22°28.14' E. Follow the channel to the marina. Accessible both day and night.

## ROOMASSAARE

The Port of Roomassaare was named the “Best small port in Estonia” and it has held the Blue Flag since 1998. The services offered at the port include supplying vessels with electricity, fuel and water. A café and a marine equipment shop are open during the summer.

Sheltered from all directions. Approach from SE, 321.5°–141.5°. Entry along Roomassaare harbour leading line 351.4°–171.4°. Roomassaare harbour pier light – Fl Y 3 s. Roomassaare yacht harbour – E Iso G 2 s and W Iso R 4 s. When approaching from SW, after reaching Roomassaare safe water buoy you can head directly towards the marina. Entry to the guest harbour via commercial harbour.

32

## KÕIGUSTE

Kõiguste Marina is situated in the south of Saaremaa – a day’s sail from Kihnu, Ruhnu, Roomassaare or Lõunaranna. The marina offers sauna, the popular bar “John’s Place”, and other facilities.

Sheltered from all direction with easy entry day and night. From 57°17.00' N; 23°02,80' E follow course 335.5°–155.5° towards Kõiguste lighthouse (F1 W 4 s, 3 s dark, 1 s white) until 58°21.70' N; 22°58.71' E. From there head towards the gate around the small peninsula. The gate is marked with 2 green and 2 red lateral marks. Leave the peninsula to starboard and head towards the pontoons. The last red lateral mark is at the end of pontoon No. 1.

## LÕUNARANNA

In Lõunaranna harbour you can use the camp site, and your children can play in the playground. You can also rent a bicycle or a boat and make use of the sauna. A café is also open during the summer.

Exposed to N, NE winds.  
From safe water buoy (58°31.28' N; 23°19.38' E) hold course 360° along the channel marked with mid-channel buoys. Then follow the spar buoys of the lateral system and enter the harbour. Entry recommended in daylight.

34

## KUIVASTU

The small boat harbour of Kuivastu was completed in 2012. There is a café and a shop for visitors.

Sheltered from all directions. Steer along Kuivastu leading line 267.7°-87.7° (Q W - Iso W 3 s) until you reach WP1 (58°34.43' N; 23°24.00' E). Then proceed to WP2 (58°34.30' N; 23°23.72' E) and follow the entry channel marked by spar buoys of the lateral system. There is a FI G 5 s light beacon at the tip of the breakwater and Q R light beacon at the tip of the ferry quay. Regular ferry traffic to the mainland of Estonia (Virtsu).

## ORISSAARE

Orissaare port is located on the Illiku islet in Orissaare, only 700 m from the centre. The port and the Väike-Väin Strait are a great environment for sailing. The port is well protected from storm winds and waves. Around mid-July you can attend the "I Land Sound" music festival, which is very popular among locals and has received a lot of positive feedback.

Approach from safe water buoy (58°37.242' N; 22°57.955' E) and follow 130°-310° till the red lateral buoy (58°33.795' N; 23°5.680' E) from which you can easily see the green beacon (Fl G 1,5 s) at the end of the marina. Exposed to S, SE winds and chop.

## SVIBY (VORMSI)

Vormsi is a popular island during summer time. You can still observe the influence of Swedish seafarers, who settled in Vormsi hundreds of years ago, in the architecture and place names. The harbour offers bike rental.

Exposed to NW, E winds.

Follow the channel along 323.8°-143.8° (Iso W 2 s - Oc W 6 s) to the safe water buoy of the fairway (58°54.84' N; 23°23.61' E; LFI W 10 s). There is a light beacon at the end of the quay (F W). There is regular ferry traffic to the mainland of Estonia (Rohuküla harbour).

52

## DIRHAMI

Dirhami has lovely sand beaches and beautiful nature. There are 2 cafés in the harbour where you can enjoy good fish dishes and a sea view. Near the harbour is a small village shop and some accommodation facilities.

Sheltered from all directions, swell from strong N, NW winds. Approach along the leading line 170.4°-350.4° (2 Iso G 2 s). Dirhami safe water buoy is on the leading line (59°14.02' N; 23°29.67' E). The minimum width of the fairway is 60 m. There are dangerous rocks on both sides of the fairway. When the light beacon QR (59°12.68' N; 23°30.06' E) at the tip of the breakwater is abeam, steer to starboard and then to the harbour.

## PLACES TO VISIT

- Tallinn Old Town - one of the main attractions. The Old Town was built in the 13<sup>th</sup>-16<sup>th</sup> century, and it has medieval markets and many viewing platforms, where you can admire the Old Town, before wandering through the modern city centre or towards the sea
- Tallinn Kumu - the largest art museum in Estonia. Exhibitions display classical, as well as contemporary art, and everything in between
- Tallinn Kadriorg Palace - it was built by Peter the Great in 1718. Nowadays it houses the Kadriorg Art Museum, which displays the largest foreign art collection in Estonia
- Viru Bog Trail - a very beautiful hiking trail that takes you through the bog on wooden trails
- Viinistu Art Museum - displays works of hundreds of Estonian artists from various eras (the museum has about 1,000 Estonian works of art)
- Narva Hermann Castle - it was built in the 14<sup>th</sup>-16<sup>th</sup> century. Nowadays it is a museum, where one can see the permanent exhibition on the history of Narva, as well as about a dozen of temporary expositions

# TALLINN

Tallinn is Estonia's largest city and its capital, located in the north of the country. It's a beautiful blend of old and modern elements with many wonderful attractions to fill your sightseeing hours – the city offers historical sights and technologically advanced marvels in equal measure, and it is also home to a thriving artistic community that continually fuels its creative fire.

Tallinn's UNESCO-preserved Old Town is a beautiful medieval town, where traces left over from the German Crusades during the latter part of the Middle Ages can still be found.

This perfectly preserved cobble-stoned part of the city offers a fascinating overview of the region's tumultuous past, and exploring it on foot is a great way to immerse yourself in this intriguing heritage. Kadriorg was first established as a retreat exclusively for the Russian elite in the 18<sup>th</sup> and 19<sup>th</sup> century. One of the best-known museums in Estonia, the Kadriorg Art Museum, resides in the Kadriorg Palace which was built by Russian Tsar, Peter the Great. Just on the other side of the Kadriorg Palace you can find the Presidential Palace, and even walk right up to the front door for a picture. The Kadriorg Palace is located within a 30 minute walk from the Old Town marina.

## TALLINN LENNUSADAM

The Seaplane Harbour is located near the Tallinn city centre, and there is an Estonian Maritime Museum in the harbour. The Maritime Museum offers its visitors about 200 authentic items to see at the historical seaplane hangar. There is a submarine, a century-old icebreaker, a seaplane and much more.

Sheltered from all directions, but there is heavy traffic in the Tallinn Bay. Approach from safe water WP1 (59°27.50' N; 24°44.28' E) and steer to WP2 (59°27.32' N; 24°44.17' E). The harbour is protected from the east and west by breakwaters. The entrance is marked with light beacons: Fl R 3 s on the east breakwater and Fl G 3 s on the west breakwater.

Old City Marina is a modern marina for recreational vessels in the very heart of Tallinn. Located in the city centre, within walking distance from everything a seaborne traveller might need.

After getting permission to enter, steer to the port basin. There is a FI W 2 s light beacon at the tip of the north breakwater (59°26.95' N; 24°46.53' E). During navigation in the port basin, small craft have to steer clear of passenger ships and cruise liners and cannot obstruct the manoeuvring of these vessels. Small craft may enter the port basin and depart the navigation channel only during the green traffic light and permission from Radio 5. Sheltered from all directions.

57

## TALLINN-NOBLESSNER

The area has interesting loft-style offices and a seasonal outdoor café next to an actual working shipyard. The port is a short distance away from the popular Kalamaja district, full of bohemian restaurants, hipster cafés and Estonian design shops.

Sheltered from all directions, but there is heavy traffic in the Tallinn Bay.  
From safe water WP1 (59°27.50' N; 24°44.28' E) steer to WP2 (59°27.32' N; 24°44.15' E). The harbour is protected from the east and west by breakwaters. The entrance is marked with light beacons: FI R 3 s on the east breakwater and FI G 3 s on the west breakwater.

Number of berths: 87

Kalevi Yacht Club Harbour is a small marina belonging to a local yacht club. We recommend making an inquiry in advance, because the little harbour easily fills up during sailing competitions. The marina has its own restaurant, which is worth a visit.

There is heavy traffic of fast ships and ferries in the Tallinn Bay, however, it does not influence the marina. Enter the harbour along Pirita leading line 136.2° - 316.2° (Iso R 2 s - Iso R 4 s; orange round concrete tower with three white balconies - white square concrete tower). There is a FI R 3 s light beacon at the tip of the north breakwater and a FI G 3 s light beacon at the tip of the south breakwater. Iso R 2 s marks the Pirita leading line.

59

## TALLINN-PIRITA TOP

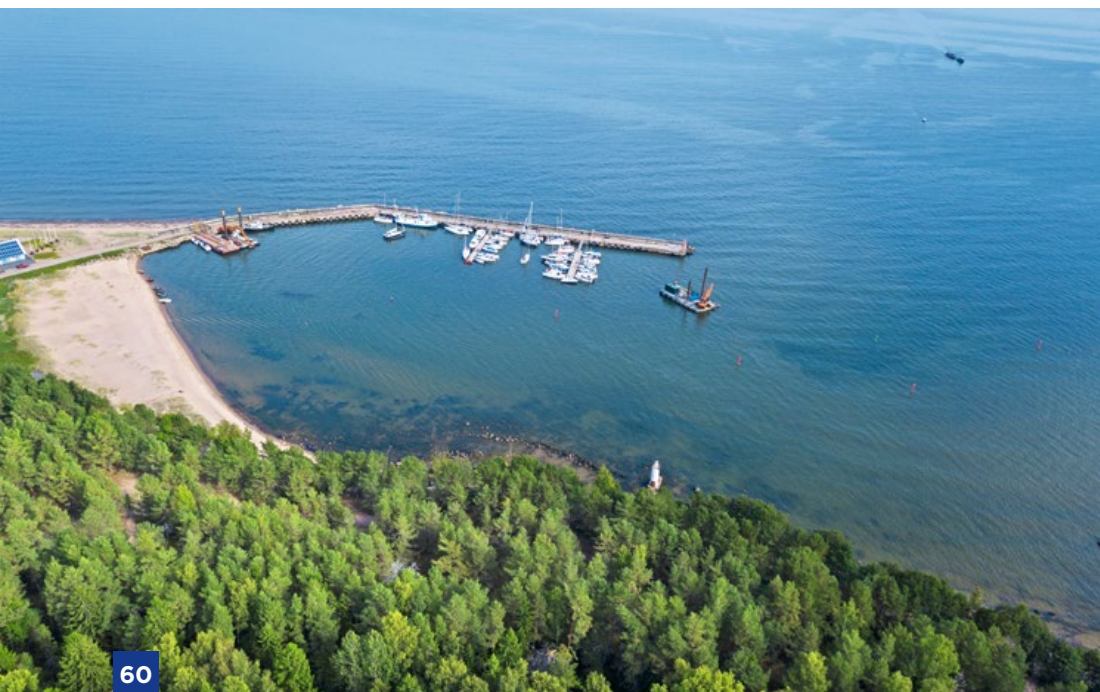

Pirita Harbour is located east of the Tallinn city centre. In addition to basic services, there are many boating equipment and clothing stores nearby, as well as restaurants and grocery stores. Pirita is known for its long beach and the spa hotel.

There is heavy traffic of fast ships and ferries in the Tallinn Bay, however, it does not influence the marina. Enter the harbour along Pirita leading line 136.2°-316.2° (Iso R 2 s - Iso R 4 s; orange round concrete tower with three white balconies - white square concrete tower). There is a FI R 3 s light beacon at the tip of the north breakwater and a FI G 3 s light beacon at the tip of the south breakwater. Iso R 2 s marks the Pirita leading line.

Leppneeme is a small village near Tallinn (14 km) and it is the main point of traffic to Prangli island.

Exposed to NE winds and swell.  
Approach from the red lateral buoy  
(59°33.210' N; 024°52.348' E) along the leading line  
227°–47°. Entry marked by lateral spar buoys.

63

1  
km

## KELNASE (PRANGLI)

Prangli island is characterised by diverse nature and beautiful landscapes. On the west side of the island there are coastal meadows with vegetation growing in salt-lime soil, and the eastern parts have sandy soils. You can cycle around the whole island in one day. Prangli island is the most northerly island in Estonia with year-round inhabitants.

Safe water WP (59°38.40' N; 25°01.39' E) is located on the leading line 222.8°–42.8° (Q G 1 s - Oc G 4 s). There is a F G light beacon at the tip of the north breakwater and a F R light beacon at the tip of the east breakwater.  
Entry is dangerous in strong NW winds and high sea.

## KOLJUNUKI

Koljunuki harbour is well renovated and offers good services. In the café "Veer" you can enjoy some good cuisine and a lovely atmosphere. The harbour offers accommodations, and near the village there is good infrastructure. Koljunuki is a good place for having a small holiday and enjoying walks on the beach.

Sheltered from all directions.  
From the safe water WP1 (59°30.40' N; 25°05.60' E) proceed to WP2 (59°30.30' N; 25°05.53' E).  
Follow lateral spar buoys to the entrance of the harbour. At the tip of the east breakwater there is a light beacon (Fl W 5 s; 59°30.30' N; 25°05.47' E).  
Entry recommended in daylight.

65

## NEEME

In Neeme you will have all your basic sailing needs covered. You can enjoy the village life and walk around the peaceful area. Near the harbour you can find accommodations and a big seminar/party room, and the village also has a shop.

Exposed only to NE winds and swell.  
Entry recommended only in daylight and good conditions. Several rocks surround the fairway.  
From 59°32.064' N; 025°9.866' E follow 223°-43° to the harbour entrance. The fairway is marked by lateral buoys.

## VÖSU

Vösu is a historic trading place that has turned into a popular summer holiday destination. It is most famous for its 3 km long sandy beaches and pine forests. The sandy terrain and low water level make the beaches very well suited for families. After having a lovely day at the beach, you can enjoy one of the many cafés and find a cosy place to stay the night.

No clearly marked waterway, but simple entrance to the harbour. Sheltered from all winds, exposed to chop from N, NW. Entry recommended only in daylight. From 59°35,496' N; 025°57,429' E follow 128°-308° to the gates.

At the entrance there is a green beacon (G BN Q G 2M) and a red beacon (R BN Q R 2M).

69

## VERGI

Vergi harbour offers all the basic services that a sailor may need. Vergi has a 3 km hiking trail which shows the fishing village's history, and quite near Vergi (within 15 km) there are 3 famous Estonian manors (Palmse, Sagadi and Vihula).

Entry recommended in daylight. Approach by following the unlit Vergi leading line 261.8°-81.8°. Safe water WP is located on the leading line at 59°35.80' N; 26°07.00' E. Harbour entrance is in the white sector 356.0°-3.0° of Vergi lighthouse (Fl W/R/G 3 s). The entrance is also marked by a leading line 1.6°-181.6° (daymarks) and lateral spar buoys. Shallow water on the west side of the breakwater.

## NARVA

Narva is the third largest city in Estonia, and it shares a border with Russia. The most famous tourist attractions are the Narva Castle, the Kreenholm Textile Factory and Narva College. You can observe classical Soviet-era architecture mixed with modern buildings.

Narva town harbour is situated 7 nmi upriver from the river mouth. The approach is safe, but steer right in the middle of the river. When steering in bends, keep to the outer side of the bend. Depth in the middle part of the Narva River, near the border between the Republic of Estonia and the Russian Federation, is 3.4-8.7 m. The border is marked by red ball fenders.
